BM STC (Italian Books) 34; Adams A 1310; Zeuthen, Die Lehre von den Kegelschnitten im Altertum (Kopenhagen 1886/1902); Branko Mitrovic - Vittoria Senes: Vincenzo Scamozzi's Annotations to Daniele Barbaro's Commentary on Vitruvius' De Architectura in: Annali di architettura 14/2002. This is the first important edition of the first four books of Apollonius of Perge's "Conica". Books five to seven remained unknown up to 1710 when Edmund Halley received a manuscript in Arabian from the collection of Johan Golius. He then published a latin translation of books five to seven, an outlook on the lost book eight, and a greek version of books one to four. Apollonius of Perge's "Conica" remains together with Euclid's "Geometry" the most important mathematical treatise of ancient Greece. Descartes and Newton used it for their studies and further developments. Our copy is complete and very well preserved but in a later binding. This is also Vincenzo Scamozzi's copy with his own entry in MS on the title-page: "De ex libris Vincentij Scamotij". Another MS entry on leaf 25r "Hyperbola - Ellipsi - Circuli" might also be from Scamozzi. Books from the library of Vincenzo Scamozzi are rare and can hardly be found in the trade.

Szabo, Die Hydrodynamik Daniel und Johann Bernoullis (in: Humanismus und Technik XIV/1970) und ders. in "Technikgeschichte" XXXVII, Seite 27f. First edition of a very influential book. "By discarding the geometrical analogies used by Huygens and Newton and adopting advanced mathematical analysis, Bernoulli was able to treat successfully a number of problems in fluid dynamics, earning him the title of one of the founders of mathematical physics... Other important observations in the Hydrodynamica include the convertibility of heat to work and the quantification of the physiology of work, e.g. the maximum work, in energy terms, a man can perform in a day" (Hill, Cat.91 (1995), No.9).

IA. 119.709; Cioranescu 3425 (ohne Verlagsangabe); Blackmer 147; Göllner 1612 (Variante bei Chesneau). - First french edition, translated by Francois de Belleforest. Variant issue with the imprint of Sebastian Nivelles. With folding woodcut-map. "rarer than the original Latin edition published at basle the same year. Bizzari was not present at the taking of Cyprus by the Turks in 1573. His information must have come from returned combatants and other sources" (Blackmer). Entirely complete copy with the map of Methoni and Navarino mentioned on the title-page verso, which, according to Blackmer, "may never have been published since it appears to be missing in every copy known". The fine map was used again by Belleforest with slightly different title in his 1575 edition of the "Cosmographie universelle". Entirely cleaned, still slight spotting in places, ownership-inscription on title-page, erased stamp to title and last leaf. The map is in excellent condition. Bound in limp vellum from old material, brownstained, new ties. Bookplate von Nostiz.

Poggendorff II,54; Biblioteca Mechanica 217f. Second edition of the collected works of Father (Edme) Mariotte, who was a physicist and Roman Catholic Priest. His papers on hydrostatics and hydraulics confirmed Torricelli's work on outflow speed of fluids and demonstrated flow resistance in supply pipes. This second edition contains most of Mariotte's published papers, together with the previously unpublished "Traité du mouvement des pendules" which Huygens possessed in manuscript form and had given to the University of Leyden. Our copy is complete and well preserved. One erased stamp on title-page, one stamp of a library, and two MS entries on title-page of volume 1. Throughout fine but several quires somewhat browned and slightly stained. Contemporary vellum with label on spine.

Adams U7; Riccardi II,178; DSB IX,487ff; Biblioteca Mechanica 228f. - First edition of the author's first work, which is generally regarded as the most important treatise on mechanics since Archimedes and a critical influence on Galileo. It is notable for its commitment to establishing mechanics on a rigorously mathematical basis and for its powerful argument that mechanics and statics are separate sciences. The work has technological implications for navigation, manufacture and the plastic arts, and it remained pre-eminent until the appearance of Galileo's "Two New Sciences" in 1638. "It marks the high point of the Archimedean revival of the Renaissance" (Rose, Italian Renaissance of Mathematics, p.222). Guidobaldo del Monte studied mathematics at Padua and Urbino, where he studied with Commandino. This is a complete and very well preserved copy of this scarce book. Old ownership stamp and entry at the beginning, one erased stamp on title-page, manuscript correction on f 40, some smaller wormholes in the broad white margins, and one repaired tear on f.112. Otherwise a remarkable clean and fresh copy.

VD 17 23:244314V; Fincham, Chiromancy and German Academic Orthodoxy. First edition of a very rare book with 153 woodcuts and two additions. "However, the proof that chiromancy was on the syllabus at Wittenberg comes from the writings of Nicholas Pompeius, for Pompeius was a professor of elementary mathematics at Wittenberg and gave lectures on chiromancy around 1653. The notes from these lectures are themselves still extant and, after finding their way into Praetorius' "Ludium Chiromanticum", were printed in bookform with additional woodcut illustrations by one of his students some seventeen years later. Two works on chiromancy from Pompeius have come down to us today, "Figurae Chiromanticae" and "Praecepta Chiromantica" both of which seem to have been first published in Hamburg in 1682. Just as in Italy we saw that chiromancy found favour with the ecclesiastical authorities of the day so, from evidence of Leipzig and Wittenberg Universities, we can see that in Germany, chiromancy was also respected in the highest intellectual and academic circles" (Fincham).

Kress B.406 (ohne den Atlasband); Palgrave III,265; Sabin 68081; Phillipf 652 (Atlas). A complete and finely bound set of this popular work. "Raynal is the first economic writer of the eighteenth century whose works present a picture of that interior struggle of the two revolutions. He declaims like a tribune of the people: he apostrophizes, he inveighs, in the manner of the demagogues; but his vehement philippics against the trade in blacks and his animated pictures of monopoly and its consequences in the two Indies, assign him a respectable place among the founders of industrial and commercial emancipation. He foreshadowed the economic revolution of the nineteenth century, of which the independence of the United States form the first episode. His work will remain as a souvenir of the first efforts consecrated to the defence of labor and the regeneration of the laborers" (Blanqui 417f). The atlas contains 50 plates, 20 of them are related to America.
